Shampa Gear

This is a line of sewn goods produced in the Southwest by a small company with the goal of making innovative variations of the products we all need. Primarily, Shampa is aimed at the motorcycle and ski industries, but the products are being introduced into many new areas such as snowmobiling. In fact, Shampa supplies BMW and other cross country race teams all of their thermal protection. They have always put an emphasis on quality and value, and we thought it was a perfect fit for our customers like you, so take a look at these new items. We think you and your customers will notice and appreciate the craftsmanship that is put into each piece.

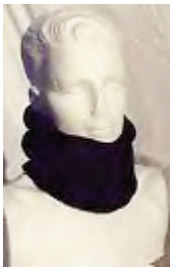

SCHAMPA BALACLAVA WARMSKIN POLYPROPELENE

This is the warmest material in a thin helmet liner style. Brushed polypropelene has a super soft feel and wicks moisture away from your head to keep it warm and dry. Of course it has Shampa's unique flat sewn seam process which eliminates pressure points that are associated with standard thick seemed headwear.

BLACK ORDER NO. **SHB-004** RETAIL **11.95**

SCHAMPA BALACLAVA PHAROH DELUXE

The King has entered the room!!! Schampa's pharoah deluxe is the ultimate in head, neck, upper chest, and face protection. Combining both WarmSkin and StormGear into one balaclava makes the Deluxe Pharoah our most extreme tight fitting balaclava to date. Fully flatseamed throughout, WarmSkin in the top, sides, and rear, with a full panel of StormGear down the front to protect the upper chest, neck, and lower face from brutal cold conditions.

BLACK ORDER NO. **SHB-012** RETAIL **26.95**

SCHAMPA BALACLAVA COTTON / LYCRA

Insulates yet absorbs sweat for year round comfort. For those who don't sweat as much and like the feel of cotton over polypropelene.

SCHAMPA SKULL GAITER POLYPROPELENE / FLEECE

This one adds the extra protection of double layer fleece around the bottom to the brushed polypropelene balaclava top. It keeps your neck warm and your head comfortable. Again, Shampa re-creates the standard by using high performance materials and innovative manufacturing techniques.

BLACK ORDER NO. **SHN-003** RETAIL **19.95**

SCHAMPA THREE - WAY

This unique balaclava uses three different fabrics to keep you comfortable in the most extreme conditions. On top we've put our silk weight CoolSkin fabric, on the rear panel we've inserted Schampa's WarmSkin fabric, and up front is a full panel of our new wind and waterproof Soft Shell fabric. The entire piece is flatseamed and made with our new no-seam cut in the forehead which helps to reduce pressure caused by traditional seams located in the front over the forehead.

SLP Ultra-LITE SLT Straight Line Tracking

Precise, Effortless Steering

Patents #5700020, #6012728 and Patent Pending

The SLT (Straight Line Tracking) Ski is made of high quality UHMW plastic for a super strong, durable, wear resistant ski that is extremely slippery and remains flexible even in severe cold conditions. Its patented rocker keel design places more forward weight directly below the spindles for increased keel penetration and better bite in the turns. It results in precise, effortless steering in all snow conditions

Unique Center Keel Design:
Center keel features an hour glass design with a concave front to minimize tracking even on frozen, rutted trails.

Carbide Combinations:
Multiple carbide combinations are available to match individual riding styles and snow conditions. (#35-127 Carbide and #35-121 Keel Blade pictured. This combination provides the maximum reduction of darting on groomed or hard-packed trails.) See page 7 for more information on carbide configurations.

Outer Gull Wings:
Outer gull wings reduce darting, increase flotation by trapping and compacting snow underneath the ski, and increase turning ability by providing additional steering component surface area.

Prices for Pistons & Gaskets

See applications on pages 116 to 171, F, FSM, GP & LL Pistons & Rings are OEM Style, WI are Wiseco

O E Style Pistons refers to pistons made to exact Original Equipment specifications. These pistons are interchangable with O E parts and begin with F09, GP or LL.

O E Stlyle Rings are also made to exact Original Equipment specifications. They are interchangable with O E rings and are made to fit on the original pistons. In rare cases we have seen where manufacturers have made a running change to the ring style and the rings will not fit on the original pistons.

O E Pistons are offered for Hirth, Kohler and Sachs engines. These are Original and are limited to stock on hand.

Wiseco Pistons begin with WI and do not interchange with O E RINGS.

Wiseco Rings only fit Wiseco Pistons. Wiseco Rings do not interchange with O E Rings.

O E Style Pistons refers to pistons made to exact Original Equipment specifications. These pistons are interchangable with O E parts and begin with F09, GP or LL.

O E Stlyle Rings are also made to exact Original Equipment specifications. They are interchangable with O E rings and are made to fit on the original pistons. In rare cases we have seen where manufacturers have made a running change to the ring style and the rings will not fit on the original pistons.

O E Pistons are offered for Hirth, Kohler and Sachs engines. These are Original and are limited to stock on hand.

Wiseco Pistons begin with WI and do not interchange with O E RINGS.

Wiseco Rings only fit Wiseco Pistons. Wiseco Rings do not interchange with O E Rings.

O E Style Pistons refers to pistons made to exact Original Equipment specifications. These pistons are interchangable with O E parts and begin with F09, GP or LL.

O E Stlyle Rings are also made to exact Original Equipment specifications. They are interchangable with O E rings and are made to fit on the original pistons. In rare cases we have seen where manufacturers have made a running change to the ring style and the rings will not fit on the original pistons.

O E Pistons are offered for Hirth, Kohler and Sachs engines. These are Original and are limited to stock on hand.

Wiseco Pistons begin with WI and do not interchange with O E RINGS.

Wiseco Rings only fit Wiseco Pistons. Wiseco Rings do not interchange with O E Rings.

GATES 'BARRACADE' LOW PERMEATION FUEL LINE

25' ROLL. Not for high pressure. Eventually, EPA regulations will require that machines built with low-perm fuel systems be repaired with low-perm lines. Five-layer Greenshield™ Barrier Technology keeps fuel out of the environment while delivering peak fuel efficiency.

WAMP-15 BLEED

WAMP-13 BLEED

WAMP-16

MADE BY WALBRO AS USED BY ARCTIC CAT 94-10

The bleed hole: If the tank runs completely out of fuel, the pump will suck both pickups shut. Even if the power is removed from the pump, the pickups will remain shut--sometimes up to an hour. Even if more fuel is added to the tank. The bleed hole will break the suction in these cases. With the bleed holes, the pickups will open within a couple minutes. The bleed holes are very small. They allow the pickups to open when needed, but don't allow air into your fuel lines. Runing a system with more than one bleed hole is not a problem. Walbro reccomends replacing any pick-up with one that has a bleed hole.

FEWER PARTS AND PRECISELY MADE WITH PERFECT COMPATIBILITY TO ONE ANOTHER MAKES THE **DUSTER** THE FINEST "EVERYDAY" CLUTCH ON THE MARKET

- There is a **DUSTER** for all most everyone...regardless of belt top width or crankshaft sizes.

102C $420 Complete!

PERFORMANCE

DESIGNED FOR SNOWMOBILES AND OTHER APPLICATIONS THAT REQUIRE A FULL RANGE OF EXCEPTIONAL ABILITY FROM ENGAGEMENT THROUGH THE HIGHEST SPEEDS.

- The 102C has become an industry standard for performance and dependability.
- Unsurpassed tuning ability
- Outperforms clutches of similar design
- Designed for ease of tuning and servicing

103-HPQ $450 Complete!

- **HIGH PERFORMANCE QUAD (POLARIS AND KAWASAKI)**
- **Uses same tuning parts as 102C / 108C / 4PRO**
- **SAME ADVANCED FEATURES AS THE 180-EXP**

108-EXP $450 Complete!

- Built to handle high horsepower engines
- Continual and constant smooth shifting after hours of use
- Tried and tested in high Horsepower Snowmobiles
- **Uses same tuning parts as 102C / 108C / 4PRO**
- Wider rollers for increased bearing area, increases duribility and wear
- Larger diameter floating cam arm bolt for increased wear resistance
- Towers are spaced evenly to enable wider rollers and better stability
- New cast aluminum cover keeps the cover and movable face bushings in alignment and locks the towers in place

108-4PRO $275* Uncalibrated

***LIMITED AVAILABILITY**

THE SUPER CLUTCH

A HIGH PERFORMANCE CLUTCH DESIGNED WITH THE RACER AND PERFORMANCE TRAIL RIDER IN MIND. IT IS ESPECIALLY SUITED FOR HIGH HORSEPOWER APLICATIONS.

- The **108-4PRO** utilizes four clutch weights rather than three, allowing more precise tunability and provides greater belt pressure to reduce slippage.
- New larger movable sheave bushing on the **4PRO** provides for higher heat and wear
- Captivated towers on the **4PRO** allow the cover bolts to virtually eliminate tower spreading which provides for longer clutch life and smoother operation.
- Use the same arms and springs as the 102C, 108C and 108EXP. Simply divide the total weight of the arms from a three arm clutch by four AND ADD 15% when selecting **4PRO** arms.

WHILE MANY OF THE ABOVE ENGAGEMENTS ARE THE SAME OR NEARLY SO, THEY ARE OBTAINED VIA DIFFERENT COMBINATIONS OF SPRING AND PUCK WEIGHT. GREAT DIFFERENCES WILL RESULT AT HIGH RPM'S EACH SPRING COLOR HAS A DIFFERENT COMPRESSION RATE. THE STRONGER THE SPRING IS, THE GREATER THE PEAK RPM'S IT WILL ALLOW. AVOID USING A SINGLE SET OF PUCKS IN THE DUSTER AS THE TOTAL PUCK TO FACE FRICTION AREA WOULD BE INADEQUATE TO KEEP THE MOVABLE FACE FROM SLIPPING INSIDE THE COVER (NON-RIBBED COVERS.)

Drive Belt Descriptions

UltimaxXS
High Performance Belts by CARLISLE

ULTIMAX XS belts will be available for the 2006/07 Snowmobile Season. Carlisle is pleased to announce the next generation of snowmobile belt – Ultimax XS. Ultimax XS is designed for high horsepower sleds and delivers strength and dependability never before available. Carlisle innovation provides superior performance and longer belt life unsurpassed by any competitive belt.

Ultimax XS has increased strength and is built with new heat tolerant materials. With a revolutionary new compound, extra strong Aramax cord, and new manufacturing processes, Ultimax XS will run cooler, longer and faster. Extensive lab and field testing have proven that Ultimax XS can withstand the punishment that today's super-sleds dish out. Capture the Power with belts by Carlisle!

ULTIMAX 4

Cooler for more power. Heat build-up in drive belts costs horsepower. The double cog design of our Ultimax®3 belt dissipates heat and aids flexibility. Cooler running belts - over 10 degrees cooler than flat-top designs - mean better performance and longer lasting belts. Better flexibility cuts energy loss, allowing more horsepower transfer from the clutch to the secondary.

Carlisle is the industry's technology leader. Extensive R&D resources, continual materials refinement and precision compounding assure every Ultimax3 provides durable, aggressive operation. Whether for track or trail, count on the rugged construction of the Ultimax3 to deliver drive performance.

Built for quicker acceleration. Double cog Ultimax3 belts feature a thicker cross section than flat-top designs. More surface contacts the clutch. That means less slippage over a broad speed range for quicker acceleration.

Precise manufacturing equals precise performance. Over the past six decades, Carlisle has engineered and manufactured belts for industry's most critical applications. This expertise helps us build Ultimax3 belts to tight tolerances.

Benefits of precise belt length: Enhances efficiency of the variable-speed drive system. Eliminates excessive friction and tension preventing drive damage caused by short belts, which wears belts and bearings. Assures highest speed ratio, and prevents loss of top speed. Exacting belt length tolerances minimize system wear and avoids excess slippage.

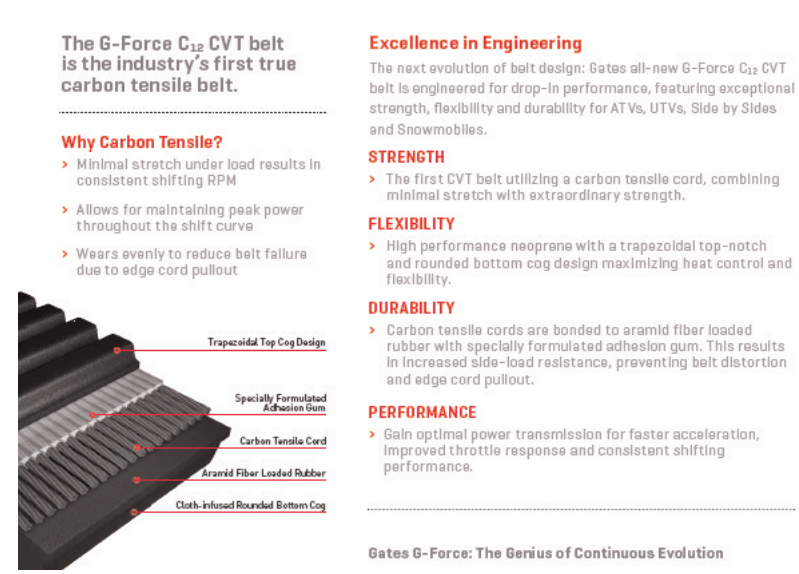

G-FORECE BELT DEVELOPMENT

Gates has developed proprietary design equipment and software that work together to create belts that are a precise fit to the OE. Not a consolidation of sizes – the exact same fit. Using Profiler VT™, Gates state-of-the-art 2-D laser profilometer together with Gates PTWorks measuring software, profile characteristics and specifications are identified including belt length, width, pitch, thickness and angle. The data from Profile VT is fed into PTWorks where it is analyzed and compared to test results, which ensure that G-Force belts meet the same shift characteristics, speed ratios, durability and vehicle performance requirements as the OE belt.

G-FORECE BELT ADVANTAGES

- Dynamometer testing proves G-Force belts outlast other high-performance belts by as much as 5 times
- Equivalent OE performance and durability at a reduced cost
- OEM constructed drop-in belt with no clutching adjustments
- Tested under extreme conditions in controlled environments as well as race vehicles
- Matches OE belt shift curves and pulley speed ratios
- Advanced aramid tensile cords and reinforced fiber loaded undercord are used in construction for durability and dependability
- Proprietary measuring technology assures exact fit
- Construction utilizes double and single cog configurations to match OEM belt designs maximizing heat control and flexibility
